EDUCATION

University of Western Ontario

Bachelor of Computer Science

London, ON

September 2022 – Expected April 2027

EXPERIENCE

Contract Software Engineer

November 2025 – December 2025

AthenaHQ (YC W25, brand visibility in AI search)

Remote

- Built the analytics feature end to end: SQL aggregations computing share of voice, mention rate, and citation counts across AI search engines, surfaced through dashboard components shipped to **every customer account**.
- Added a competitor comparison matrix, letting customers see their own visibility scored against rival brands on the same set of metrics.

Software Developer Intern

May 2025 – August 2025

RBC Amplify

Toronto, ON

- Built a liquidity forecasting platform that won the program's **\$20K** Industry Disruptor Prize and was adopted by RBC's Commercial Banking team.
- Built a multi-user synchronization engine on Python FastAPI WebSockets, adapting algorithms from Figma's published research to hold state consistent across simultaneous editors during collaborative financial modeling.
- Designed an interactive "infinite canvas" interface in React.js backed by tree-based data structures, giving users a visual node graph where they drag and drop connections to map complex cash flows.
- Split client onboarding across three specialized AI agents (Analyzer, Architect, Recommender) running as Python microservices, automating the process and cutting manual structuring time by **92%**.

Software Engineer

February 2025 – May 2025

Boardy (AI networking agent startup)

Remote

- Engineered an autonomous meeting agent on Recall.ai, Deepgram, and LiveKit, reaching a **99%** join success rate and **sub-500ms** voice response times across Zoom and Google Meet.
- Cut inference costs **40%** by layering models of different sizes behind context-aware prompt chaining, keeping the agent able to navigate unstructured conversations.

PROJECTS

Open Source | Merged contributor: [langchain](#), [cloudflare/workers-sdk](#), [openworker](#) | Python, TypeScript, MCP

- Fixed a bug in **langchain-core** where chain-group runs were not finalized when a **BaseException** propagated, so cancellation and interrupt paths left runs unclosed.
- In **workers-sdk**, fixed Miniflare's proxy boundary rejecting Node.js global **Request** objects, which broke **getPlatformProxy()** calls into multi-worker Durable Objects; normalized the bridge request while preserving the caller's request semantics.
- In **openworker** (open-source AI agent, **12,000+** stars), fixed a remote code execution flaw where cloning a repository let its config file silently launch processes on open; gated it behind the project's trust check, blocked by default, with regression tests a maintainer verified against the original proof-of-concept.

Nodes | [thenodes.ca](#) | React, TypeScript, Firebase, Chrome APIs

- Built and shipped a LinkedIn outreach Chrome extension solo in under a month, grown to **1,000+** users who have indexed **17,000+** profiles to date.
- Ran extraction client-side inside the user's own logged-in session, parsing against fallback selector chains so a LinkedIn markup change drops single fields instead of failing the run.

TECHNICAL SKILLS

Languages & Frameworks: Python, TypeScript/JavaScript, SQL, React, Next.js, Node.js, FastAPI, LangChain

Cloud & Infrastructure: AWS (EC2), Google Cloud Run, Cloudflare (Workers, R2), Docker, Kubernetes, CI/CD, Linux

Data & Tools: PostgreSQL, Firebase, Kafka, REST APIs, WebSockets, MCP

AWARDS

MLH Top 50 (2026) — one of 50 selected from Major League Hacking's global community of 500,000+ student developers. 12 wins and 5 other top-3 finishes across 20+ hackathons: 1st overall at UofTHacks 11, HackHarvard (Truth & Trust), NexHacks at Carnegie Mellon (Best Design), Hack Western and QHacks (2nd).
